

Calculating the volume of a cube and cuboid

1. A garden water trough is in the shape of a cuboid which measures 90cm by 30cm by 20cm.

- (a) Calculate the number of litres that the trough holds when it is completely full. ($1000\text{cm}^3 = 1 \text{ litre}$) [4]
- (b) The water is used to fill 300 small cuboid shaped vases like the one shown in the diagram.

Calculate the height, $h\text{cm}$, of the vases.

2. An ornament is packaged in a cardboard box which is a cube of side 12cm.

- (a) Find the volume of the box. [2]
- (b) Calculate the area of card which would be needed to make the box. [Ignore any overlaps] [2]

Another ornament is to be packed in a box which is a cuboid with **half** the volume of the cube.

This box is to have a square base of side 9cm.

- (c) Calculate the height, $h\text{cm}$, of this new box giving your answer correct to 1 decimal place. [4]

Finding the area and perimeter of a shape

1. Calculate the perimeter and area of these rectangles:

2. My bedroom has dimensions as shown in the diagram.

- (a) Calculate the cost of carpeting the room if carpet costs £23.99 per square metre. [3]
[carpet is sold in whole square metres only]
- (b) A border is to be put round the walls. Find the length of border required. [2]
[ignore any gaps for windows and doors]
3. The square and the rectangle have the same perimeter. Find the missing length. [4]
